

Advice Following treatment with Dermal Fillers

If you have any concerns, please contact me via email in the first instance - on sageaesthetic@me.com, and I will contact you as soon as possible (usually within a couple of hours) to arrange a time for you to be reviewed in the clinic. Please remember to include a telephone number.

AFTERCARE

A few simple rules to follow - treat your new dermal filler nicely and it should settle nicely.

Day of treatment:

- NO COSMETICS - for about 12 hours. This is because of bacteria on your brushes and in the cosmetics themselves.
- MOISTURISE - the skin prep for the procedure is very drying.
- ICE PACKS - reduces swelling/discomfort.
- Simple painkillers such as paracetamol or ibuprofen can be helpful if you are able to safely take them; if in doubt please ask me.

From Day of treatment and for one week after treatment:

- EXERCISE - gentle exercise is no problem, such as walking. However higher impact exercise such as running/jogging, aerobics, also exercise which involves straining (weights, rowing etc) are unsuitable. Swimming is best avoided for the first few days to avoid infection.

From day one ongoing:

☀️🔥❄️ SUN - sunburn is known to be a trigger for inflammation and problems with fillers. Also potential triggers are extremes of heat and cold. Please avoid.

Things to look out for:

- 😞 We have already discussed things to look out for, but just as a reminder...
- 😞 Fever and/or chills
- 😞 If the area appears red, hot to the touch, and “angry” looking
- 😞 Severe pain or increasing pain
- 😞 Discoloured blotches in areas not injected or whiteness of injected areas.
- 😞 Cold sores - if you are prone to cold sores, then treatment with lip filler can trigger an attack. If this happens, please contact me ASAP for a prescription to treat this.
